The bottom slab is casted

The first delivery

Professional discharging

The second delivery... Everything has to be at it's place.

The first layer

After 4 hours , the first layer is ready

Now, the plan-bricks have to be worked up

Brick after brick

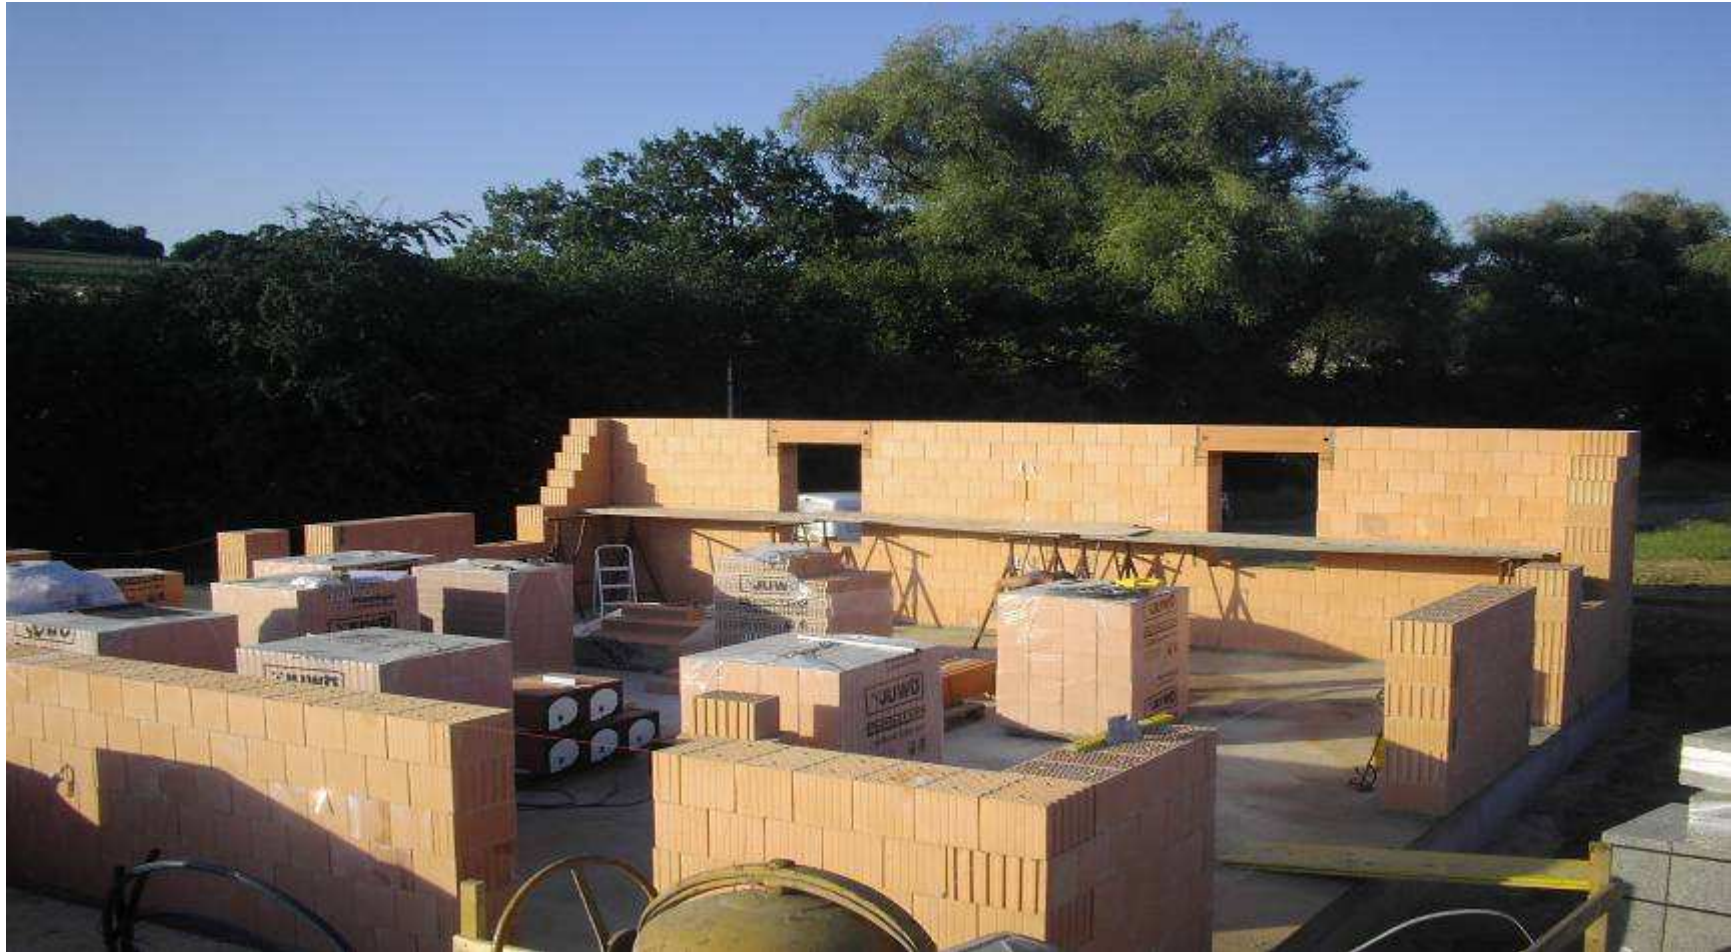

Some hours later-The building is growing fast

The result of one day

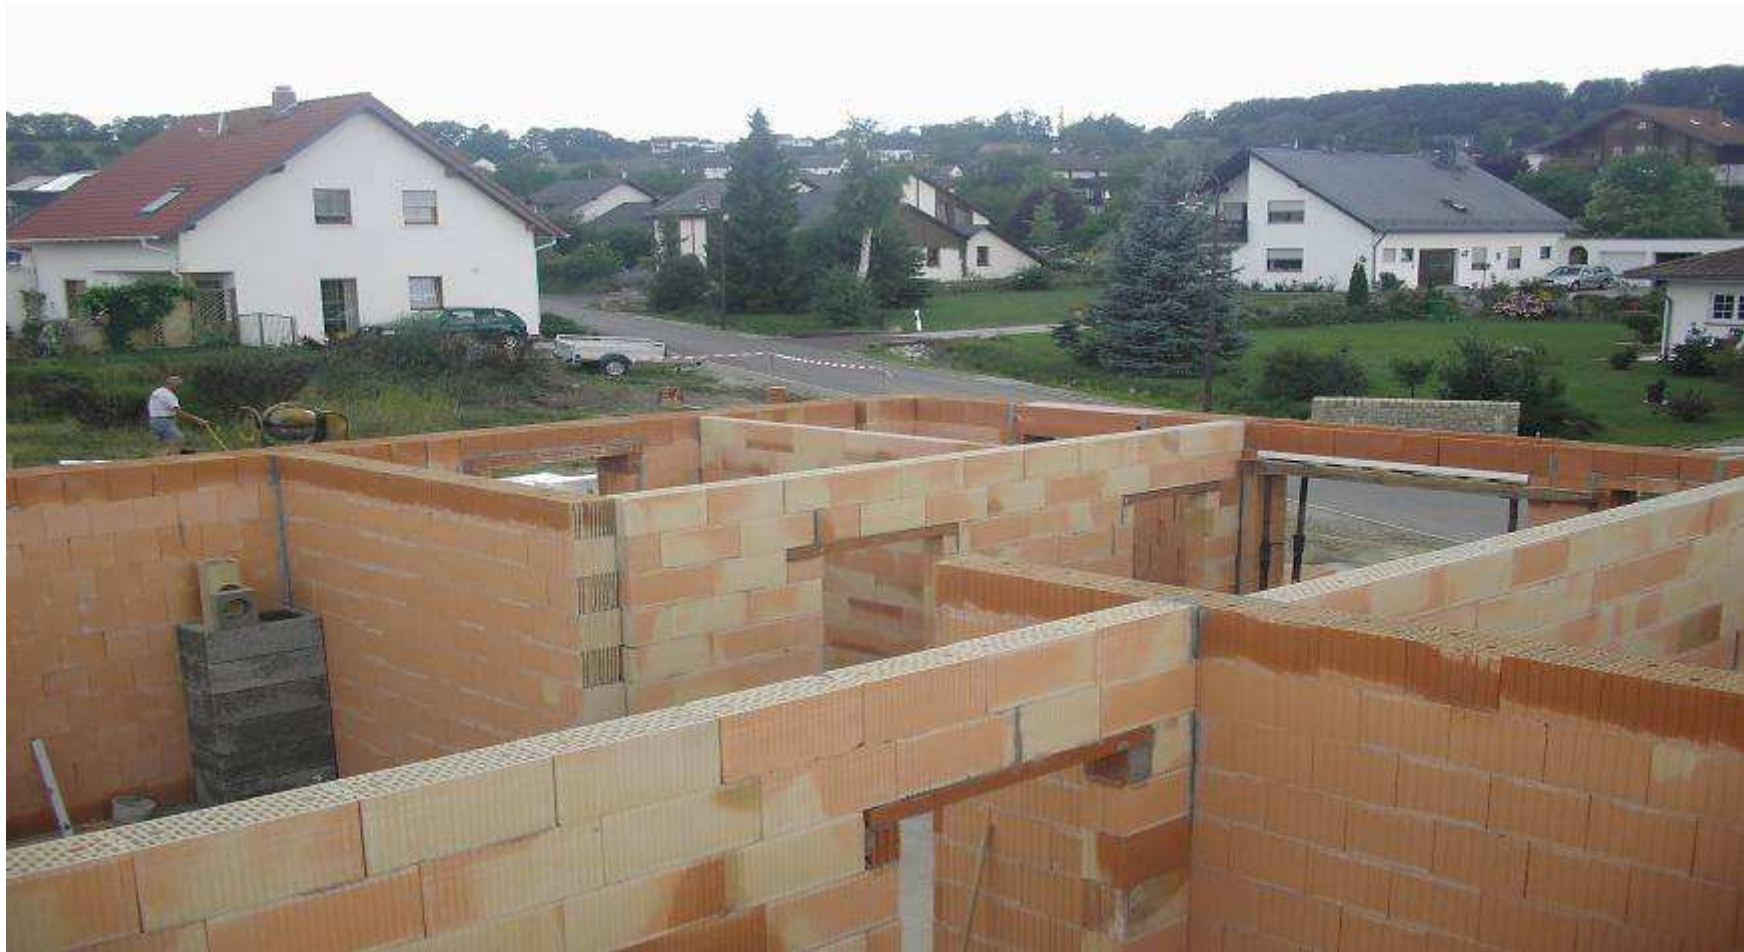

The next day - The inside walls

Nearly ready

After 30 hours with 3 workers

After 30 hours with 3 workers

During the time lag of ceiling delivering – the garage was
built

Bricks for the top floor

Again – the first layer is ready

Exact plans allowed the preparation of the bricks for the pitch

Usage of U-Blocks for the ring armature

The ring armature encloses the masonry

Some details

Working with concrete is finished

Inside walls in top floor

Now, the truss can be constructed

Craftsmanship – just great

Insulation at the ring armature....

Finished

The result of 120 hours work

Finally

The complete building shell was finished after 5 days.
