A new generation of Irish architecture

A house on Inis Óirr in Co Galway has just been showcased at the BAU fair in Munich

GEMMATIPTON

For many, the idea of an Irish vernacular architecture coniures images of John Hinde-esque stone cottages, preferesque donkey or two outside.

has become peppered with dormer bungalows that seem somehow more suburban than rural. Completed in 2013, Brigid Keane's Inis Oirr house, which has just been showcased at the BAU building and architecture fair in Munich, is an excellent example of what a new generation of architecture might look like.

The two-storey, three-bedroomed house is at home in the wild and dramatic landscape of also features innovations in its structure and design.

Architect Patti O'Neill of Co

project through the planning

The first site visit was in 2009, and the couple wanted a holiday home that would ultimately be somewhere to which ably thatched, and with a pictur- to retire. Shortly after permission was granted, however, More recently the landscape Kevin was diagnosed with a terminal illness; he died later in

Building on an island

Brigid decided to carry on with the project, and the team started on site late in 2012. Building on an island means everything has to be transported by ferry, a process that turned out to be much easier than O'Neill had anticipated.

Even the unpredictable weather wasn't a problem its west of Ireland setting, but it something the architect credits to her choice of material: Poroton monolithic clay blocks.

These were introduced into Tipperary firm O'Neill Archi- Germany as an ecological buildtecture initially came to the pro- ing material, but now account ject because the site owners, for more than 40 per cent of Brigid and Kevin Keane, need- building in that country. "It's ed someone to shepherd the now a mainstream product,"

the material from her training in Germany.

Irish climate

And while it is an imported product, she also argues it is uniquely suited to the Irish climate, in that it absorbs moisture without becoming damp, giving the house a BER of A3. "If you think about it, the potato was an import too," she adds.

She also notes that despite the expense of importing, the clay blocks are cost-neutral, because building is four to five times faster than with conven- not seen, it doesn't have to be tional blocks.

The house is built over two wall, and with a sun-trap balcony-cum-terrace, and views Moher. It is cosy and yet also

says O'Neill, who knew about has a sense of drama, without dominating its site.

"It's really a lot of common sense, good design, fitting into the landscape, using good materials," says O'Neill. "That's what good architecture is. Its message is so subtle it's almost

Its message is so subtle it's almost not seen, it doesn't have to be glitzy

glitzy.'

For Keane, "the house is a stories, sheltered by a retaining dream come true. It's a sanctuary, a place to recharge in an idyllic island, with lots of memoacross the sea to the Cliffs of ries." Good architecture in-
